Activity Report

Type of activity: Exposure and field visit for Problem identification

Title of activity: Farmers and their Diseases.

Name of the associating organization: Department of Pharmaceutics

Date and time: 31/10/2022, 10.00 am to 6.00 pm

Target Students: B. Pharm II year

Objective of activity (15 words/100 characters): The field survey was conducted to identify the health problems faced by the farmers of Aurangabad city and its interior.

Name of the associating organization: --

Duration of the activity (Minutes): 480

Expenditure Amount if any: INR 1000/-

Mode of Session online/offline: offline

Star performer Faculty: Dr. Moizul Hasan

Star performer Student: Mr. Shoaib

Program type: field visit.

Program Theme: R&D and Innovation

Start date & end date: 31/10/2022 & 08/11/2022

Quarter: I

Number of Student participants: 24

Number of external participants: 00

Number of faculty participants: 08

About activity:

Farmers are exposed to a number of biological, physical and chemical factors harmful to the health, resulting from the specific nature of their work environment. As is clear from epidemiological studies about occupational diseases, pneumoconiosis and infectious and parasitic diseases are recorded most commonly. Due to the character of farmer's work, the greatest risk to his health is biological hazards in the form of numerous microorganisms and their metabolites, and particles of

plants and animals contained in the organic dust and pathogens transmitted by vectors such as ticks. The health status of farmers is often worse than of other professional groups as a result of limited access to health care and lower health literacy. The aim of this activity is to characterize occupational diseases of farmers.

The Institute Innovation Cell (IIC) in association with Department of Pharmaceutics conducted a field visit in accordance with the IIC Calendar activities for the academic year 2022-23. The activity conducted was on the theme "Exposure and field visit for Farmers and their Diseases". The field survey was conducted to identify the health problems faced by the farmers of Aurangabad city and its interior. Total 24 students and 8 faculty members were participated in activity. It is observed that farmers are prone to musculoskeletal, respiratory, and gastrointestinal disorders. Musculoskeletal pain is very common for which long daily working hours over many years is a contributory factor. The commonest complaint was musculoskeletal pain. Generalized fatigue, acidity, and headache were other common complaints. This had significant association with age and the number of years in profession.

The access of the farmers to health care, especially specialists' doctors is difficult. At the same time most of the health awareness of the rural population is judged to be very low. The fact is that farmers are not yet sufficiently covered by a system of detection, diagnosis and recognition of occupational diseases.

Therefore, farmers should be subject to a system of diagnosing occupational diseases, and many preventive and educational programs concerning health risks associated with their work.

Outcome: It is found that Farmers are very susceptible to health-related problems and there is need for monitoring on an ongoing basis to prevent it.

Feedback: The feedback was taken from all the participants. The response received was very good. Participants has given very positive response and suggested filed visit topics for future.
